

LGV is planning an event to address how we can develop plans for a large community owned energy farm, using a variety of renewable electricity generation and storage technologies in a fair way in our rural communities.

**We'd like you to join us on
Saturday 9 December
Between 10am - 4pm.
At the CRiC Centre**

1 Beaufort St, Crickhowell NP8 1BN

**We'll be holding discussions at
11.00, 12.00, 14.00 & 15.00
Or just drop in for a chat and a cuppa.**

(maybe even a slice of cake)

Locally owned, community energy generation and storage.

Using a mix of technologies for continuity and resilience of supply.

Generating energy locally will reduce our reliance on fossil fuel energy sources, providing long term energy security.

Some of the benefits could be: local employment, cheaper energy, a community fund - creating an income for use on other local projects. eg transport, home energy improvements. Protect wildlife habitat across the region and enhance native species and boosting local biodiversity.

The project will cover all communities supplied from the Crickhowell sub-station: Crickhowell, Llangattock, Llangynidr, parts of CwmDu, Tretower and Bwlch, Llanbedr, Vale of Grwyney.

Could this area be more self-sufficient in terms of renewable energy provision?

Which areas of the landscape do people cherish the most and should be protected?

Which areas are less sensitive and could host renewables?

What type and scale of renewable energy projects might be acceptable?

Please come and tell us how you can help us better understand our community views and needs and how we can keep you informed about our progress.

**Talk to us at the Crickhowell Resource and Information Centre
(CRiC) 10am - 4pm on 9 December**
